

### Integration Testing

Test Id	Test Case Objective	Test Case Description	Expected Result
1	Verify integration between login and homepage after login.	Enter login information and process login.	After login, the homepage should be displayed with confirmation of login.
2	Verify integration between account and update account.	Enter new information and update the account based on new information.	After update, the new information should be held in the account.
3	Verify integration between subscription and payment method.	Upon subscribing the user will pay per month based on their subscription.	After subscription, there will be a confirmation and verification of identity. Then the subscriber will have access to all the website's features based on whether the subscriber is a student, coach, or an expert.
4	Verify integration between subscriber type and ability.	Based on the type of subscriber abilities will be different.	Students should have student abilities, coaches should have coach abilities, and experts should have expert abilities.
5	Verify integration between the site and the game.	By clicking "play game".	The game should be able to be loaded, played, and quit without affecting the rest of the site in any way.
6	Verify integration between the site and the social media .	By clicking one of the social media icons.	The user should be able to share information from the site to social media.
